

# *What is science anyway?*

*method, knowledge, attitude*

George Matthews, Plymouth State University

2020

# *the scientific method*

# *the scientific method*

- Make lots of careful observations.

# *the scientific method*

- Make lots of careful observations.
- Look for apparent patterns in the observations.

# *the scientific method*

- Make lots of careful observations.
- Look for apparent patterns in the observations.
- Take a guess at an explanation for those patterns.

# *the scientific method*

- Make lots of careful observations.
- Look for apparent patterns in the observations.
- Take a guess at an explanation for those patterns.
- Deduce consequences of your explanations.

# *the scientific method*

- Make lots of careful observations.
- Look for apparent patterns in the observations.
- Take a guess at an explanation for those patterns.
- Deduce consequences of your explanations.
- Test to see if those appear.

# *the scientific method*

- Make lots of careful observations.
- Look for apparent patterns in the observations.
- Take a guess at an explanation for those patterns.
- Deduce consequences of your explanations.
- Test to see if those appear.
- Repeat with more observations, other explanations, new consequences, adjusting as consequences fail to appear.
